*The BodiCool WAVE breast form*

*Designed with your comfort in mind*

*Full-coverage of the soft TruCool Gel which provides maximum contact and delivers an advanced cooling effect*

*Advanced WAVE design to promote air circulation between your chest wall and breast form, enhancing the cooling effect*

*Lightweight silicone for additional comfort*

*Silky-soft skin for comfort*

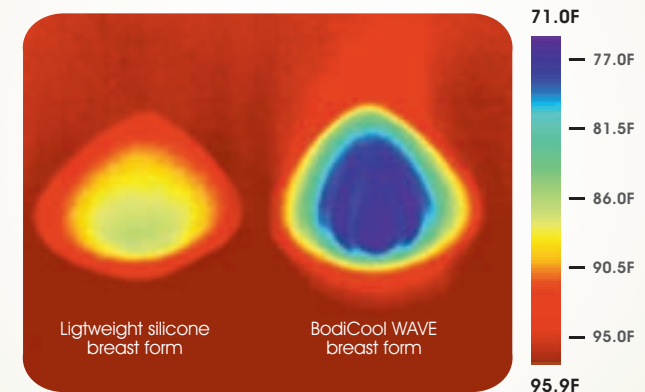

Visit your Naturalwear retailer today to experience the cool, lightweight comfort of BodiCool WAVE.

It's the newest, innovative breast form, only from Trulife.

*We know what's important to you!*

**HOW DOES TRUCOOL GEL WORK?**

TruCool Gel provides a constant cooling effect by continuously drawing excess heat away from the body and storing it within the product. Once removed, the product releases the stored heat and regenerates its cooling properties for continuous effect.

Thermal imaging clearly shows the BodiCool Wave breast form is effective at reducing heat on your chest wall. Keeps you cool the whole day long.

The yellow and red areas indicate warm temperatures on a standard lightweight silicone breast form in contrast to the cool, mostly blue and green, colors on a BodiCool WAVE breast form.
